

Ohio has not had a comprehensive energy policy for years and starting with ideas to reduce carbon is a good first step. However, if you really cared about carbon emissions, HB 6 is not the answer. It bails out costly nuclear plants, leaves the door open to pay more each month for dirty coal plants, and does so at the expense of low-cost, truly carbon-free energy like wind, solar and energy efficiency. IF you take away incentives for clean energy and reducing energy waste, Ohio's carbon emissions will go up -- not down. That's why I oppose this bill.
