Ohio House,
Columbus, Ohio
Energy&NaturalResourcesCommittee@ohiohouse.gov

To whom it may concern,

Ohio needs a comprehensive energy policy; however, HB6 IS NOT it!

HB6 bails out costly, inefficient, aging nuclear plants at our expense and the expense of truly carbon free energy like wind, solar, and energy efficiency technologies.

We oppose HB6 and anything that takes away incentives for truly clean energy and waste reduction technologies.

We do believe that the few good jobs that will be lost by the closing of the dangerous, aging, inefficient nuclear plants will be made up in the emerging energy producing technologies as their safer production increases and their efficiency will continue to improve over the years.

Also the problem of extremely dangerous waste production and storage is non-existent with wind, solar, and reduction technologies.

The costly HB6 is an expensive (in too many ways to enumerate) ill-advised attempt to do what needs to be done...please revisit this impending bit of legislation for the good of the citizens of Ohio.

Most sincerely,
Frank and Janet Jodlowski
