

Summary AB6 Testimony: Harvey Wasserman

1) These reactors must be independently inspected and financially appraised by independent state agencies before public money beyond market-rate income is designated to support them. They must be examined for embrittlement, cracking, deferred maintenance, crumbling of the shield building, seismic vulnerability and other issues relating to their dollar value before they receive public funds. They also need to be financially assessed for purposes of bankruptcy. Can we say exactly what is their market worth?

2) A "Retain & Retrain" Program must be put in place so that no worker at Perry or Davis-Besse faces unemployment when they shut. Many must stay to help decommissioning. The rest should be retrained for the wind, solar and other businesses, which will boom in the region especially if the wind setback clause is adjusted to match those in surrounding states.

Additional information will be provided verbally. Thank you.
