

As a military mom, I want my sons to bring their families back to Ohio. Let's welcome them home with a booming economy in an environment that fosters the jobs that they need. I am a proponent of Ohio establishing our own Nuclear Development Consortium and Authority in order for the development of Ohio as the premier hub of new nuclear technology applications in various industries. This move will advance a precipitation of defense contracts to our state, a revival of manufacturing, advancements in medical diagnostics and cancer treatments.

As a two time cancer survivor, I need affordable early diagnostics and effective treatment. Let's place the reactors that create the nuclear materials within our borders. This will lower costs and give us more actual material to work with. Northeast Ohio is already home to the best medical care in the world.

It can be better with better diagnostics and nothing beats nuclear medicine for that.
