Dear Senators, SB234 Bill

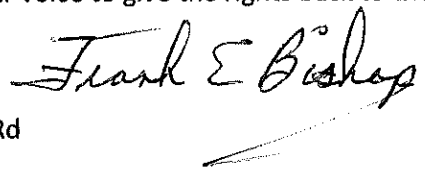

My Family enjoys living in rural Ohio , for many reasons we choose not to live our lives in a city . We have many relatives who live in Columbus area and other cities in Ohio . When they visit us, these friends all comment how quiet and peaceful it is at our property . Now we have many Industrial Wind projects threatening to invade our newly built retirement home, with 1 turbine being proposed to be located 1350' directly in line with our front porch which we use and enjoy daily with our grandchildren , friends and family. Actually there are 12 proposed within 2 mile radius of our home . We have taken 12 acres of property out of farm production and planted 6 of that into butterfly and wildlife habitat and 6 into a woodlot to enjoy our retirement years .

Now we have put off any more improvements to our property and will continue Not to invest anymore money until we know if we have any type of say whether these Industrial Machines are built near our home. It is insane to think you can compare a spinning Industrial wind turbine to a stationary cell tower , underground pipeline, or other standing fixtures . You were elected to represent the people so we should have every right to have a say whether these projects belong in our area . By denying a PILOT program at the county level as we have done is not a say in these projects | The people effected should have some control at the township level .

I would stand firmly to give the local constiutents a voice in their townships .

Thank You for your voice to give the rights back to the people.
