

To Whom it May Concern,

I am 43 years old and I have lived in Sherman Township my whole life. The thought of these wind turbines in my backyard is just gut wrenching. The lay of the land is beautiful. Everyone takes pride in where we live and we have worked hard for what we have. I have three kids who love to play outside and enjoy the freedom of country life. My wife and I sit many mornings and evenings enjoying the views of the clear skies and our surroundings. These turbines would not only take away everything we have worked so hard for, but they would also turn our beautiful land into a nightmare of disasters. These wind turbines have no positive effect on our land, culture, people, or the animals around us. Nobody will benefit from the turbines except the people who get paid. This all comes from greed. I do not think we should suffer from someone else's greed. We have a right to stand up and say NO. We also have a right to vote and it should matter what people say. We should not have someone that does not even live here, around us, having a say in the matter. Put a turbine in their back yard and see what the results are! It is a very upsetting subject to many people who dislike the thought of these things even being considered to be near our homes and land. I hope you respect the voters of our land who hold you responsible for our future.

Thank you.
