Re: Senate Bill 56 & House Bill 72 Update

---

We wanted to provide you with an update on Step Therapy/Fail First reform (SB56/HB72) as Ohio patients continue to push for better access to appropriate prescription medication in the final days of the Ohio Legislature.

As evidenced by the continued compromises that have been made by the coalition advocates, we have reached broad consensus among interested parties with the latest version of SB 56 and HB 72. Included in the language of these companion bills are three opportunities for step therapy exemptions for Ohio patients:

1. The required drug is contraindicated for that specific patient, pursuant to the drug's FDA prescribing information
2. The patient has tried the required prescription drug while under their current, or a previous, health benefit plan, or another FDA approved AB-rated prescription drug, and such prescription drug was discontinued due to lack of efficacy or effectiveness, diminished effect, or an adverse event
3. The patient is stable on a prescription drug selected by their health care provider for the medical condition under consideration, regardless of whether or not the drug was prescribed when the patient was covered under the current or a previous health benefit plan

In a major push toward passage of step therapy reform in the 132<sup>nd</sup> General Assembly, the coalition has agreed to remove components of the bill that would have allowed for an exemption in the best interest of the patient. While we feel the best interest provisions are imperative for creating sound health care policy that prioritizes patients, we also recognize the immediate need to help as many of the hundreds of thousands of Ohioans as possible whose health is currently being negatively impacted by harmful step therapy protocols.

As time is running out, the cry from patient advocates is growing louder. It's time to help Ohioans get access to the medications they need. It's time to pass SB 56 and HB 72.
