

Talyn Goudy  
HB 36 Proponent Testimony

Hi my name is Talyn Goudy from Millersburg Elementary School. Today I will be talking about the monarch butterfly's beauty. The hindwing and the forewing are the best part of the butterfly. It brings out the orange that is outlined in black. A monarch butterfly's bright colors tell the predators to go away. Their wings look like stained glass windows. They have a compound eye to help them see. They have long bodies for there long wings. People know that our state bird is the cardinal because it's bright red wings stick out more. That's how I feel about the monarch. It has bright colors all over its wings and it will be recognized by people of Ohio.
