

I Stephen Weaver am writing in opposition to the proposed OAC 3701-36-05 for the following reasons.

Posting vaccine product consumption rates will only encourage Dr's to push more vaccines and turn a blind eye to the sideeffects. Both of my children had side effects or reaction the the vaccines they were given. When we brought this up with our health care provider they told us that was completely normal. When we chose to delay or stop giving vaccines our Dr. kicked us out of there practice.

The decision to vaccinate or not should be the right of the parents. Tying financial incentives to vaccination rates only encourages people to vaccinate for the wrong reasons (money) vs the right reasons (trust, believe, and benefits to your health).

I request that you vote No on SCR10

Sincerely Steve Weaver
