

Witness Testimony for HB371

In May of 2021 I was diagnosed with Stage 1 breast cancer after a 3D mammogram 5 months prior. I am lucky as it was caught very early. During my surgery and radiation I witnessed first-hand women who did not have the access to early screening either because of age or financial circumstances. One woman is a 33 year-old flight attendant who was diagnosed Stage 4 during her annual physical. If she had a mammogram at 30 she would not be fighting for her life. In another case a woman with limited resources was deciding about radiation treatment. These cases are heartbreaking and preventable. This should not be happening in America. Please pass HB371.

Respectfully,
