

I AM a RegisteredNurse retired after 45 years at the largest healthcare foundation in Cleveland. I have conducted investigational studies with many physicians examining new devices, medications and some questionnaires. Integral to this process is a signed consent form by the study participant listing liability, adverse effects and who to notify if issues.

The COVID gene therapy injection referred to as vaccine is an investigational agent. I do not give my consent to obtain this therapy at this time. I should not be belittled, discriminated against or prevented from any activities or lose any freedoms for not participating in this investigational study. I might consent to this injection after FDA approval. I do not want to at this time and should have therapy choice. I support HB 248! I support healthcare privacy and discrimination protection. Please pass HB 248!
