

My name is Sidney Fouty and I work out of my home for a roofing company in Granville, Ohio. They reason I support House Bill 248 is because as a child I had a very bad reaction to a flu vaccine. I became very sick with fever and chills within hours of receiving the vaccine. My mother never took me to get a vaccine after that. I take supplements that boost my immune system that fights off any virus or infection. I have not been sick in years. There have been many times a virus has been detected before any symptoms manifest. I have been able to boost my immune system naturally. This works for me and I have no side effects. In fact, none of my supplements have side effects such as vomiting, diarrhea or possible death. I can live with that. Everybody is different and should have the choice of how they care for their body. Nobody should be penalized for their choice.

Thank you once again for this opportunity to provide testimony on the need for and urgency of House Bill 248.

Sincerely

Sidney Fouty
