

It is unconscionable that people should be coerced into taking an experimental Emergency Use Authorized mRNA treatments under threat of losing their livelihoods.

There have been no long-term studies into the safety and efficacy of these treatments. These treatments do not appear to be safe or effective.

Pfizer's own exclusionary criteria for test subjects in its phase 2 clinical trials excludes all but the healthiest subjects –why is Pfizer cherry picking test subjects? Because Pfizer knows these treatments are not safe.

Healthcare organizations and providers are being incentivized by the federal government to mandate these mRNA treatments.

The CDC's own co-morbidity adjusted covid death rate shows only 22k died from covid alone or only 5% of the reported cases so the hysteria is not justified by the numbers.

The risks of these treatments outweigh the benefits as the numbers of deaths and debility continues to grow each day as seen on the CDC's Vaccine Adverse Event Reporting System.

HB248 is desperately needed to protect public health from the massed hysteria and tyranny that this questionable pandemic has created.
