

First and foremost, it is against our Constitutional rights to be mandated an experimental vaccine! There are no long-term studies for the side effects of this, or even an ingredients list. Therefore, there is no informed consent for these vaccines. I personally have had Covid, as proven by an antibodies blood test. I do not need an experimental vaccine in my body. My immune system is far superior than any synthetic shot. My immune system already knows what to do. Also, the side effects of the vaccine could be detrimental to my health. We should NOT be discriminated against either by being subjected to Covid testing or segregation. There are several medications that have been proven to arrest Covid such as Hydroxychloroquine and Ivermectin. They are being suppressed as they do not fit the agenda. This goes against the Nuremberg Code. Many of us have worked all or most of the pandemic without many resources to protect us. And now we will lose our livelihoods if we don't comply. We were good enough to work through the shortages and chaos, but not now? As our elected officials we are demanding that you protect our freedoms and rights with the passing of HB 248. Thank you for your time.
