Last updated February 24, 2020

CONDITION:

**MUST READ!!
CRITICAL INFO !!!**

NOTES:

***** DANGEROUS DRUG
INTERACTION !! ***
DO NOT ADMINISTER
ANY STEROIDS WITHOUT
CONSULTING ME OR
EITHER PARENT.
*** I CARRY AN EPI-PEN
FOR ALLERGIES AND BEE
STINGS**

I REFUSE ALL ANTI-
SEIZURE MEDS

Notify Emergency Contacts

I REFUSE ALL ANTI-
SEIZURE MEDS
INCLUDING BUT NOT
LIMITED TO VERSED.

I REFUSE ALL ANTI-
ANXIETY MEDS
INCLUDING BUT NOT
LIMITED TO ATAVAN.

I DO NOT HAVE EPILEPSY
OR EPILEPTIC SEIZURES
!!!!

I HAVE VASOVAGEL
SYNCOPE (P.N.E.S.) AND
AM NEGATIVE FOR
P.O.T.S.

Notify Emergency Contacts

Parents have Medical POA
and applies regardless of
state of consciousness.
Their POA, INPUT &
REQUESTS ARE TO BE
HONORED BY PHONE !
PLEASE DO NOT USE
SMELLING SALTS, IT
TRIGGERS MIGRAINES

DO NOT TAKE ME
ANYWHERE BUT EITHER
UC MAIN CAMPUS OR
BETHESDA NORTH !!!!!

Call Dad @ 513.503.5962.
If you get Voice Mail, call
again!! My Mom's contacts
are 513.503.5961 cell and
home is 513.984.3472;
one of them will come to
pick me up from where I
am, DO NOT transport me
for seizure like activity! I
only need a little time to
wake up. It is NOT
unusual to go in and out of
consciousness; however
this does not happen

IRREGULAR

HEARTBEATS/PVCs AND

VOMITING ARE NORMAL

DURING A SYNCOPE

EPISODE. PLEASE don't

do the sternum rubs, etc.

They don't work, they only

hurt me and make it

worse. Nosebleeds

happen occasionally also.

I am apraxic during

episodes, I cannot speak

or communicate until the

episode is ending or over.

I have Conversion

Disorder /

NeuroCardiogenic

Syncope &

NeuroPsychogenic

Syncope / Vasovagal

Syncope / (P.N.E.S.) /

Ehlers-Danlos Syndrome

(EDS) / Spinal Scoliosis /

Mitral Valve Prolapse /

ADHD (non hyper type) /

Learning disabilities and

allergies to bee stings

muscle mass and the
heart. Muscles help blood
flow and I have low muscle
mass. This also effects
blood flow especially while

Notify Emergency Contacts

CONDITION:

**Ehlers-Danlos
Syndrome (EDS)**

NOTES:

EDS is a connectivity tissue disorder that effects ligaments, tendons, muscle mass and the heart. Muscles help blood flow and I have low muscle mass. This also effects blood flow especially while under stress &/or anxiety which can cause fainting or passing out (vasovagal syncope/PNES). This may happen more that once per episode, but I am in no danger and simply need rest. Conversion Disorder makes me more likely to be anxious &/or stressed. The mitral valve prolapse is believed to be related to &/or caused by EDS.

Please see the below information that I received from the Ohio Department of Public Safety, and let me know if you have any further questions:

Below are the statewide totals of EMS runs submitted to the Emergency Medical Services Incident Reporting System (EMSIRS), and counts of agencies reporting to that system for each of the years 2019-2021.

Caveats:

- The majority of these runs would be emergency in nature as that is what is required to be reported. Runs such as public assists, lift assists, etc. would not necessarily be reported to the system.*
- Incidents where two different agencies may have treated the same patient, only the agency performing the patient transportation to the final destination would have reported the incident to the system to avoid duplicate entries and to insure that accurate final patient disposition data is received.*
- While reporting emergent runs is required, the agency reporting compliance rate varies by year with 2020 and 2021 peaking at approximately 85% participation.*
- Information for the year 2021 is incomplete and only reflects data received and processed by 9am on 10/25/2021.*

	2019	2020	2021
<i>Count of Agencies Submitting Data to EMSIRS that Year</i>	843	890	886
<i>Count of Incidents Reported to EMSIRS</i>	1,830,148	1,830,176	1,621,462

Thanks,
Alex
