

Dear members of PUCO,

Having looked at the substance of HB 118, I implore you to do all you can to oppose it. The heart of HB 118 is the determination to stop wind and solar projects in Ohio--the very renewable energy sources that the experts around the world say we must emphasize to slow the global warming/climate change resulting from the old reliance on fossil fuels. Why would Ohio prevent and destroy good jobs provided by the renewable energy industry? I'm a native Ohioan, and I find it so discouraging that our government typically goes for the uneducated solution to problems, solutions that tend to be only what the pollution-and-cheap-labor bloc pays for. Please don't make that mistake with HB 118.

Sincerely,

Suzanne Miller
