

Opponent Testimony of Senate Bill 52
Mikayla Pieper
Paulding Chamber of Commerce
Senate Energy and Public Utilities Committee
March 23, 2021

Chairman Peterson, Vice Chair Schuring, Ranking Member Williams, and members of the Committee:

Thank you for the opportunity to offer opponent testimony on Senate Bill 52. My name is Mikayla Pieper, Executive Director of the Paulding Chamber of Commerce.

The Paulding Chamber is dedicated to the economic health and vitality of Paulding County and the entire northwest Ohio region. We are committed to working with the business community, educators, and government to establish the best possible business environment.

As you may know, Paulding County has experienced like no other county in the state, the tremendous benefits of wind development. The PILOT payments are the #1 tax revenue resource in Paulding County, providing an impressive new revenue for our schools, new income for area landowners and new revenues for local businesses who supply goods and services to the renewable energy companies. In addition, wind energy has brought hundreds of new, temporary jobs during the construction phase as well as permanent jobs with highly-paid, highly-trained staff.

Because of these benefits, clean energy development has been the No. 1 opportunity for economic growth in Paulding County.

You may wonder why the idea of a local vote would concern me. We're preparing right now to welcome solar development to Paulding County. **We're not done growing and encouraging clean energy investment in our county. We're not done investing in our children and building opportunities for our farmers to earn new income.** If you'll notice in my testimony, I attached a summary of the total PILOT revenues collected and projected from 2019-2021 as well as the projected PILOT revenues for a new solar project.

This is our opportunity to secure a recession-proof, resilient economy for years to come. Singling out renewable energy development with Senate Bill 52 imposes burdensome new red tape and will create a chilling effect on solar and wind investment that would likely act as a *de facto* ban. Especially when other energy generation resources do not face the same obstacles.

As Sarah E. Hunt, CEO of the Joseph Rainey Center for Public Policy shared about other similar legislative attempts: “What smart, innovative company will attempt to build new electricity infrastructure in Ohio, only to face a fatal referendum after millions have already been spent?”

Join me in opposing Senate Bill 52 and let’s not surrender the opportunity to grow our economy and welcome thousands of new jobs to our state.

Thank you for the opportunity to submit this testimony and I’m happy to answer any questions.

Mikayla Pieper
Paulding Chamber of Commerce
