

Dear Committee Members,

I am writing today in opposition to HB 118 and SB 52. In my opinion these bills are an unwarranted government interference in the energy market. They provide an unfair disadvantage to new renewable energy projects that are not applied to other energy projects. These bills both provide a disincentive to create new clean energy jobs in our communities at a time when such jobs are desperately needed. These bills are not needed, and run counter to the interests of Ohio residents. Committee members, please do not advance these bills.

Richard Bradley
