

Nuclear is not the solution. Scientists have no solution to nuclear waste. None. It is slow, costly and produces few jobs long term. Coal is not prudent now nor has it been since hydrogen fuel cells were discovered. Not only is mountaintop coal removal and tar sand excavation obliterating ancient forests but coal plants poison the air we all breath and the water we all are connected to in the cycle of evaporation, watershed, priceless aquifers and our precious sea. SB117 aims to reverse the HB6 corruption of ratepayer money. Please pass SB117. Instead of subsidizing coal, unnatural gas and nuclear... bring jobs installing and maintaining solar panels over parking lots. Suspension cable solar canopies are affordable and don't need new land agreements. Then, invest in offshore windmills in Lake Erie. Radar is not affected by them. Also, home hydrogen fuel cells are already operating in Australia in tandem with a solar electrolysis system. When the electricity from the solar system on the roof is not needed, it is stored in the form of hydrogen. Hydrogen fuel is also made from bacteria and CO2 and even from methane. I believe it will provide what oil does and more. How quickly we endorse and fund it, is currently up to you lawmakers.
