

Dear Committee members for HB308,

Surely the energy companies are doing an incredible job at fooling/bribing state legislators (ala the Householder, among other, enormous acts of fraud) into thinking that anything related to nuclear power/waste could possibly be considered "green" in any way.

The carcinogenic impact of nuclear/reactors/waste has been very well documented since the first nuclear reactor opened with folks working in these facilities and the towns/farms around them seeing much higher levels of cancers than areas far from a reactor (although we are all downstream'/downwind').

Please consider the fact that there has NEVER been a safe way to store nuclear waste and wherever it is put will contaminate the soil/water/air for thousands of years.

If you have any interest in being "green" start with banning fracking in the state of Ohio as this is a major contributor to greenhouse gases among other health/safety disasters.

Please understand that radiation is equally devastating to our planet than greenhouse gases so cannot be considered "green". You can take a stand/do the right thing by stopping this madness now. Your children/grandchildren will thank you.

Sincerely,

Maxine Gilgoff
