

I am sharing this story on behalf of my friend Wayne Maddy's wife, Sandy Maddy. She passed away in July 2020, due to loneliness at not being able to be with her loved ones. She was a patient at a nursing home, and all patients were to be tested for Covid frequently. Even though Sandy tested positive every single time, she never showed any symptoms. She went to Aultman Hospital in February of that year because of an infection from a feeding tube. She eventually went back to the nursing home, but later returned to the hospital again, and was there until her death. Wayne and his daughter JJ weren't able to see her for 120 days when she was in the hospital because they were told Sandy had Covid. The hospital wanted to put her on a ventilator, but JJ refused. Eventually, Sandy died alone in the hospital. The day before her death, the doctor told JJ that if her mother passed, her death certificate would say nothing about Covid. But it was a lie, and the death certificate stated: "cause of death due to complications from Covid."

While his wife was in the hospital, Wayne had also gone to the same hospital for a few days because he was having difficulty breathing, and had lost his sense of taste and smell. He was put on dialysis, and immediately improved. His pastor had also prayed for him while visiting him. While Wayne was in the hospital, five of his siblings also contracted Covid. One went to the store and bought Ivermectin for himself and his siblings. They all took it except one and were over it in two days. The one brother refused to take Ivermectin, was sent to the hospital, got put on the ventilator and died within 14 days.
