

Before I begin, I gave a speech several months back at the Ohio press conference where this bill was introduced. This speech has over 27 million views, yet Ohio media has yet to write a word, except for a newscaster who made fun of me.

Here is the link and I recommend you watch it to know what is coming for these children being medically transitioned - [Link](#) I also encourage you to watch this video and see what promoting childhood medical transition looks like [Link](#)

This is reckless, and the truth is that the medicalization of gender-confused children is the most significant medical scandal in modern history. I would know I did it and study it to save my life. When the truth comes out, people will be forced to answer why they allowed this butchery for as long as they have!

Remember: Medical transition is 95% experimental except top surgery; it's dangerous, doesn't cure anything, causes massive health issues, and the ONLY study that has stood the test of time about the success rate tells us medical transition makes mental health worse.

As you read this essay [please keep what I wrote above in the forefront because it is factual regardless of feelings!

[Long-Term Follow-Up of Transsexual Persons Undergoing Sex Reassignment Surgery: Cohort Study in Sweden - PMC \(nih.gov\)](#)

Additional Clinic Essays Below

Submission below:

My name is Scott Newgent. I am a lesbian. I am a woman, despite having altered my body surgically and with hormones to look like a man. Only women can bear children, and I was blessed to carry children, and I have three of my own!

So, I know quite a bit about kids and transgender treatments. I want to put an end to the idea that medically transitioning children is about human rights. They're not. It's about money. It's about sexualizing children. It's about pedophilia. It's about queer theory - breaking all boundaries of normalcy and child safeguarding.

Let me explain. I will start with the money.

In less than three years, during the peak of the medically transitioning debate, several influential LGBTQ+ organizations have witnessed a remarkable surge in donations. One such organization is 'The Trevor Project,' which primarily focuses on representing and supporting LGBTQ+ children. Previously, their average donations amounted to a million dollars, but in a stunning turn of events, this figure skyrocketed to a staggering 70

million dollars. With this influx of funds, 'The Trevor Project' has been able to make a significant impact, sponsoring over 187 state bills and establishing a robust learning curriculum. They have assembled an army of 22,000 dedicated employees and volunteers who are actively engaged in teaching about queer theory and transgender ideology in school systems across the United States and beyond.

Another prominent LGBTQ+ organization that has experienced a substantial increase in donations is the American Civil Liberties Union (ACLU). Their annual donations have surged from 100 million dollars to over 300 million dollars. This influx of funds has undoubtedly empowered the ACLU to further their mission of protecting and defending the rights of LGBTQ+ individuals and communities.

Planned Parenthood, an organization that provides reproductive health services, recently signed on to promote childhood medical transition as well and has seen a positive upswing in its financial numbers. In the year 2020, they witnessed a cheerful green in their donation figures, marking a significant change as they had not experienced such an increase in donations for over a decade.

Each child who is transitioned is worth more than \$1 million dollars at a minimum. It starts with the psychosocial intervention of social transition in which all the adults affirm the kids' delusion that the child can change sex. This is cruel. Because it is telling the child that everything - absolutely everything - is wrong with the child's body. They were born wrong.

According to recent statistics, approximately 8.4% of the population between the ages of 13 and 17, which amounts to around 25 million children, identify as transgender in the United States. The number of children who believe they are transgender has seen a significant increase, rising from 200,000 to over 2.1 million children.

One notable aspect of this shift is the impact it has on the pharmaceutical industry. Lupron, a puberty blocker drug commonly used in transgender healthcare, has become eight times more profitable when prescribed to children rather than adults. This is primarily due to the drug being categorized as a "bad box drug," meaning it carries a higher risk but also generates substantial revenue.

Here are the factual complications of this drug for children:

[Decreased life expectancy](#), [Premature death from heart attacks](#), [Premature death from pulmonary embolisms](#), [Bone damage](#), [Possible liver damage](#), [Increased mental-health complications](#), [Increases chances of mood-syndrome symptoms](#), [Increased suicide rates than the non-trans population](#), [12% higher chance than no trans population to develop symptoms of psychosis](#), [Brain development stunted during hormone blockers](#) [Reduced chance for lifelong sexual pleasure](#), Probably does [not even improve mental health outcomes](#)

In 2020, Lupron Pharmaceuticals was indicted in the United States for multiple counts of criminal offences, specifically bribery and false advertising, leading to an astounding financial penalty of \$874 million (US Justice, 2020)[1]. This egregious misconduct not only cast aspersions on the ethical foundations of the company but also was a stark revelation of lupine tendencies within a supposed healer.

Brobdingnagian as it may appear, the fine imposed on Lupron Pharmaceuticals is reflective of the magnitude of corruption they actively participated in. The company was reported to have paid millions in kickbacks to doctors across America, essentially bribing them to prescribe their medication over their counterparts (US Justice, 2020)[1]. Furthermore, they were penalized for false advertising, which allowed them an unfair competitive edge, misleading patients into selecting their products under fraudulent pretensions (Federal Trade Commission, 2020)[2].

Considering the sheer number of children who identify as transgender, it is estimated that if every child in this category were to undergo medical transition, it would generate an astounding one trillion dollars annually. This financial aspect further emphasizes the significance of conducting thorough research and gaining a comprehensive understanding of transgender youth experiences.

The gravity of this statistical shift highlights the importance of further research and understanding of transgender youth experiences, as well as the need for supporting appropriate and comprehensive healthcare services. As advocates for diversity, inclusivity, and youth well-being, it is crucial for us to remain informed and responsive to the evolving needs of this demographic.

I encourage you to review the detailed report, which offers a comprehensive analysis of the factors contributing to this rise and provides valuable insights into the challenges faced by transgender youth. Such information will undoubtedly contribute to any ongoing discussions or initiatives pertaining to this topic.

An 18-year-old died during a vaginoplasty because puberty blockers resulted in his penis being too small to flip inside out to make a cavity. A piece of his colon was needed for the surgery. The result was necrotitis.

Males on puberty blockers at young ages and then cross-sex hormones - and about 95% continue on - will never experience an orgasm and be sterile, of course.

Another effect of estrogen on males is that it keeps their appearance looking young, with high voices, soft skin and tiny genitals. Remember what I said about paedophilia?

Step 3 in the Mengele-style (Men - Ge- Lay - For Your information - a nazi doctor that performed horrible experiments on jewish kids) treatments are cross-sex hormones. Estrogen and testosterone are being handed out like candy. With no - zero - studies that, these drugs resolve gender dysphoria, alleviate companion mental health issues or

prevent suicide. In fact, suicide increases POST TRANSITION. Post-transition, transgender people are 19 times more likely to commit suicide.

In a National Institute of Health study published a couple of months ago, 2 of the 315 kids took their lives within one year of starting hormones - that's more than 50 times the national average. These kids were purportedly being treated by the best gender doctors and were screened for severe mental health issues and in affirming families.

Online sellers of these drugs are darlings of private investors. These groups are partnering with community kid's groups to peddle to kids. These drugs ultimately result in sterility - in as little as four months for males and within five years for women. But don't worry - these hormone sellers have partnered with fertility groups who - for a price - will try to get their sterile kids a baby later. They create the problem and then solve the issue. As long as you can pay.

Long-term cross-sex hormones cause heart issues, joint pain, and increase cancer risks - hell, girls as young as 17 are getting fatal liver cancer from testosterone. Does this sound life-saving to you?

Listen to the detransitioners - even when they stop the hormones, their physical body continues to atrophy and suffer from the effects of the drugs. They have pain that no doctor knows how to treat because this is a giant experiment on Kids. Kids who are developmentally unable to comprehend the risks or what they are giving up.

Now for the surgeries. Vaginoplasty - I already talked about one of the risks to a healthy boy - death.

Now, let's get gross - shall we? Hair growing in the cavity, odour of bowels, sleeping with a wound expander inserted to prevent the hole from closing. Remember, we are doing this to healthy bodies and minors in the name of authentic self.

Males are having their gonads removed. WPATH and its President Marci Bowers promote eunuchs as a gender for children. It shouldn't be allowed for adults. It's insanity.

For the females, it's breast removal - let's not call it top surgery and make it sound like no big deal. It is - it is huge. Besides the complications that occur in the majority of the surgeries, there are no takebacks. Once the breasts are gone, they are gone forever. So is the ability to breastfeed a child.

Phalloplasty is the holy grail of surgeries and the most expensive and least successful. Look at my arm - this is a deformity I show the world almost daily to get something that resembles a penis that is hidden in my pants. Some women carve up their thighs to get a facsimile of a penis that carries a substantial risk of serious complications and long-term effects.

The surgeries are a growing market - one that is so lucrative that it is tracked so people can invest in it. In the US, surgeries were worth \$1.9 Billion in 2021 and is expected to grow at a compounded rate of 11.23% annually. This is better than most stock and bond returns. No wonder there are more than 400 pediatric gender centres in the US now, when 10 years ago, there were just a handful.

Children are the new revenue stream. They are also being used as cover for depraved and fetish behaviour. It goes like this - if they can normalize the transgenderism of children - they can claim to be trans is natural, immutable and normal. It is none of these things.

This new agenda will open access to children, sex positivity, and normalizing the sexualization of children.

So, I ask you - is this transgender movement about human rights? No - It's about pedophilic's rights, fetish's rights and depravity. It's about robbing children of their innocence and profiting from their bodies.

Every lesbian and gay man, parent and grandparent, woman and man should be standing up and saying no. Keep your hands off the children and vulnerable adults who are being used to feed the machine. NO ONE HAS THE RIGHT TO HARM A CHILD - NOT THE PARENTS, NOT THE DOCTORS, NOT THE TEACHERS, NOT THE GOVERNMENT.

I ask that Ohio does the right thing and bans childhood medical transition because soon when the carnage spills over, they are going to want answers to why their leaders did not protect children!

Sincerely,
Scott Newgent Transgender man
