

H.B. 587 is what Ohio needs. Kratom in its unadulterated and natural form has been used effectively and safely by millions of Ohioans for decades. Synthetic extracts and altered forms are NOT the same and should be removed from the market but natural kratom should remain available. Kratom Consumer Protection Act would greatly benefit our wonderful state by allowing millions to continue the use of natural kratom but would eliminate all of the unsafe and poorly marketed synthetic products as well as put an age limit and provide a standard of safety by mandating laboratory testing of those natural products. I've struggled with pain my whole life and have tried every treatment I've ever had access to but still find that natural kratom is essential to keep my life functional and I know millions of others who responsibly do the same. Please support H.B. 587.
