

Kratom has helped me live a normal life. I have pain from both back and hip injuries. I am also a recovering opioid addict. I cannot take pharmaceutical or street opioids due to the danger inherent in the drug to me. Kratom is also very easy to self control. There is no chasing the high. It is a maintenance supplement. It both helps me with pain while also keeping me away from extremely dangerous drugs. I am responsible. My family is proud of me. Without this miracle of a plant I would probably be dead. It is far easier to use this to come off of much harder substances than it is to use methadone or whatever else can be prescribed. Those things create far worse withdrawal symptoms than any street drug can. Things like methadone as well as methadone are extremely disruptive to your life. kratom makes things so much easier. I support Hb 587. Please consider moving forward with this. It is crucial for the fight against opioids. As well as a much healthier alternative for pain management than what is prescribed. All studies have shown it does not lead to organ toxicity. It is safer than many legal supplements already on the market.
