

HB 15 – Community Energy

I am writing to encourage the support of the Community Energy / Solar component of HB 15 which is presently in House Energy Committee. I am personally benefitting from residential / community solar and find that it is a “no-brainer” source of energy. In a sense I own my own electricity rather than renting my energy from some utility company which oftentimes means the burning of fossil fuels. We have a significant amount of clean energy available through solar power. No need to drill-baby-drill. We just need the leadership to move us to a clean energy future. And Community Energy in HB15 will help move us in that direction.
