

The only leaks and spills from solar, unlike gas, are sunlight. The only pollution from solar is light. Solar causes no cancers, respiratory diseases, hormone disruptions, explosions or pollution of our soil and water, nor does it contribute to global warming. To support HB 303 in promoting a community solar pilot program is a no-brainer. Making solar more affordable by broadening base access to off-site arrays is a win-win step to take. Encouraging loans for installation is a win-win. Allowing residents to act as community and buy shares of solar energy without having to install panels is a win-win. Offering jobs that do not dissolve within a decade is a win-win. Yay to communities who allow net metering credit for unused electricity.
