

Please stop this madness!

It seems as if Columbus and big Tech are hellbent on destroying rural life in Ohio.

It started with the solar panels taking over the very land that crops grow on and now you want to allow the destruction of our lives with noisy, water guzzling, energy hungry Data Centers.

It seems as if some of the elected officials have zero concern for their constituents in Southwest Ohio.

Mount Orab has been my home for 45 years and I never imagined we would be facing this nightmare that we are currently dealing with.

The town mayor and solicitor, along with Kelly Cole have decided that we all need a 1000 acre Data Center surrounding hundreds in a residential area.

This will take away everyone's peace and quiet(the reason we all live here) away!

Why do you think we can keep shouldering the costs associated with these monstrosities?

Many can barely afford their electricity bills now!

We do not know all the consequences to us, to this land, to our water supply, or to the creatures that inhabit this land.

Bald eagles were just removed from the endangered list 19 years ago.

When I was a little girl I never thought I would see a Bald Eagle in the wild. But a couple of years ago I saw one for the first time sitting majestically in a tree not far from my home.

Mount Orab is home to several Bald Eagles and there is a mated pair at Grant Lake.

I have had an endangered American Bittern on my property the summer before last and have photo and video proof of that.

I live only 3 or 4 miles from the Mega-Site.

If this goes up it will destroy Mount Orab.
It will not bring many jobs and it will stunt growth.
Who would want to live here?
NOBODY!

Please help us preserve our way of life.
