

Dear Mr. Chavez,

I am a resident of Hilliard Ohio. I am writing to formally state my opposition to Senate Bill 294 which attempts to classify gas as a green solution. Methane is not a green solution, trying to reclassify it as such is a lie. Solar and wind are the most cost effective forms of energy and improving battery storage makes them reliable.

This is not what is best for Ohio. This is a prime example of greenwashing fossil fuels and will make it harder to approve renewable energy projects in the state. We are making our air and water quality worse for all residents and at what cost.

Please do not let this bill pass.

Thank you,
Annette Singh
