

I am testifying on the behalf of myself as a private citizenship. Our planet is no doubt suffering lasting environmental effects, by cutting off faculty teaching about important subjects, such as climate change is a death sentence to our planet. The reason our planet has had so many negative impacts is due to anthropogenic effects caused by lack of education and knowledge on the subject. Now that we have much more knowledge on concepts such as these, I think it is extremely important to keep this in required curriculum to ensure humans don't make the same mistakes that has been costly to our planet. The access to education shouldn't be based on personal opinions, it should be based on the real facts that can be seen with our eyes, and us creating knowledgeable American citizens.

Signed: Courtney D. Bryant
