RE: HB 248 (Written only)

Dear Chairman Lipps:

I am a proponent for HB 248. I am a healthcare worker.

I am genetically susceptible to Familial ALS. There is no way to test for diagnosis of ALS. There is no known cause of ALS, and there is no cure. Yet, any doctor would tell me to get an experimental mRNA covid vaccine, well, because, that is the script they are told to say. As a healthcare worker, they are given scripts on how to handle vaccine hesitancy. I am considered vaccine hesitant.

Something triggers familial ALS genetic code and these alleged experts HAVE NO CLUE, yet tell me my risk for covid is more dangerous than my risk for ALS as good script readers they have become. My logical fear is that a mRNA vaccine creating protein spikes that misfold just might be a risk to me. I am about to find out as their test subject. You literally will have hold me down to force me to put that experimental biologic into my body. MY BODY, MY CHOICE.

Due to the current state of affairs, I am, and will be, discriminated against as unvaccinated. I always thought it was illegal to ask about somebody's family medical history or disability. But, it is my unseen familial risk to ALS that I have to speak about in order to refuse this EXPERIMENTAL BIOLOGIC for which there is no long term data. ALS doesn't happen over night so it will not be associated to the vaccine. It took a full year for both my brother and my sister to be diagnosed. They both died within 2 years of diagnosis. I should not have to be discriminated against because of somebody else's media induced panic fear of covid. I do not fear covid.

I believe I am naturally immune because I believe I had COVID in April 2020. They call SARS COV2 a novel coronavirus, but it is 2 for a reason. There was SARS COV1. Now 1 was the novel coronavirus, not 2. The fact is that SARS COV1 shows T cell immunity 17 years later.

<https://directorsblog.nih.gov/2020/07/28/immune-t-cells-may-offer-lasting-protection-against-covid-19/> SarsCOV1 recognizes SarsCOV2. SARSCOV2 is 78 percent identical to SARSCOV1. The natural T cell memory immunity is long lasting and will recognize ALL VARIANTS of SARSCOV2 because the variants are mutations with only a small difference from it's origin. (As per Dr Byrom Bridele in video attached below from brighteon.com) [https://www.cell.com/cell/fulltext/S0092-8674\(20\)31008-4?returnURL=https%3A%2F%2Flinkinghub.elsevier.com%2Fretrieve%2Fpii%2FS0092867420310084%3Fshowall%3Dtrue](https://www.cell.com/cell/fulltext/S0092-8674(20)31008-4?returnURL=https%3A%2F%2Flinkinghub.elsevier.com%2Fretrieve%2Fpii%2FS0092867420310084%3Fshowall%3Dtrue)

If the Ohio Dept of Health and Governor Dewine want to reach herd immunity (vaccines are herd immunity), they would run a t cell test on everyone prior to vaccination using <https://www.t-detect.com/>. If someone is T cell immune from SARS COV2, then give their vaccine to someone else in the world who wants and needs it because they are not immune.

The push to have people who already have natural T cell (not IGG) immunity, is an unbelievable misstep to the goal of herd immunity. Herd immunity has become a dirty word. BUT, FOR THE LOVE OF LIFE: Vaccination programs rely on herd immunity. I am including a video from someone much smarter than I. Dr Byrom Bridle, an immunologist/virologist explains herd immunity among other things, best here: <https://www.brighteon.com/0de1c02b-60fb-477e-a232-f24916213dc7>

In 2020, Cases were artificially increased due to the threshold cycles for COVID tests performed at 35-40 cycles and higher. In nursing homes, they were testing 3 x a week every resident if there was a covid positive test in the building. Most of these were false positives and asymptomatic. Now they only test unvaccinated. People who probably died with COVID and not from COVID all were COVID Deaths no matter what. Currently, the vaccinated are not considered a COVID case or death unless they have severe covid symptoms and hospitalized. It is beyond pathological for these changes to be so blatantly narrated through protocols seeking specific outcomes. And here is the CDC now showing over 2454 VACCINATED people dead or hospitalized from COVID breakthrough cases yet they stopped testing those who were vaccinated. <https://www.cdc.gov/vaccines/covid-19/health-departments/breakthrough-cases.html> And just like that, we no longer care about asymptomatic cases. Just because you are vaccinated, does not mean you cannot spread COVID. The whole reason for mask mandates was to prevent asymptomatic spread, or so I was told. If you want a deeply investigated article on the subject matter in this paragraph, I suggest this: <https://uncoverdc.com/2021/05/31/covid-19-pcr-test-knowledge-suppressed/>

So to summarize, hb248 will prevent discrimination of vaccinated vs unvaccinated, will give citizens the proper standing to rightfully refuse an experimental biologic now and in the future without fear of corporate and governmental punishments. I will pray for this legislation to pass and I thank Rep NP Jennifer Gross for her courage to bring this forward and for all her supporters also. Let freedom ring!!
