Re: Ohio HB248

Chairman Lipps, Vice Chair Holmes, Ranking Member Russo, and Members of the House Health Committee, thank you for the opportunity to provide proponent testimony on House Bill 248.

My name is Theodore Wodoslawsky and I am a Marketing Professional, father and grandfather. The reason I support House Bill 248 is because the right to decide what I and others put into our bodies is a fundamental human right. If the founding fathers of the United States had foreseen that someday we would be at this moment, they would have added the right to one's dominion over their own body to The Bill of Rights. If we do not have the right to that, we are not living in a Republic anymore.

Moreover, none of the vaccines being deployed in the USA, or anywhere in the world have been approved by the FDA. This is clearly stated on the information sheet provided by the manufacturers. As an example, this is from the Pfizer COVID-19 Vaccine information sheet, "The Pfizer-BioNTech COVID-19 Vaccine is a vaccine and may prevent you from getting COVID-19. There is no U.S. Food and Drug Administration (FDA) approved vaccine to prevent COVID-19."

My sister, aged 64, received both doses of the Moderna COVID-19 Vaccine in February. After the second dose, she felt ill and was rushed to the hospital two days later with blood clots throughout her lungs. She came perilously close to dying. This event was a direct result of the Moderna vaccine. How do I know this? There is published literature on it. PEG (Polyethylene Glycol) is known to put people at risk for clotting disorders. The lipid nano particles in the vaccines are encased in PEG, a process known as PEGylation. My sister is not the only person who has experienced this "adverse event." The VAERS database is rife with reports of blood clots from all the current covid vaccines. My sister's reaction to the Moderna vaccine was compounded due to a genetic mutation, Prothrombin G20210A and the tendency to develop blood clots. This risk is nowhere to be found in any of the vaccine information. Blood clots are not the only risk to people receiving these vaccines. We are just beginning to see the adverse reactions from mRNA injections.

We cannot allow people to be forced to make what could be a life and death decision under coercion. I believe that to be a violation of The Nuremberg Code.

Thank you once again for this opportunity to provide testimony on the need for and urgency of House Bill 248.

Sincerely,

Theodore Wodoslawsky
