

HB 248: To Prohibit Required Vaccination Status
Opponent Testimony: Arun Jose
Ohio House Health Committee
June 15, 2021

I appreciate the opportunity to provide opponent testimony on House Bill 248. I am gravely concerned by this legislation, as it would significantly weaken the robust public health framework that protects us from the devastation of many vaccine-preventable diseases. HB 248 does much more than prevent mandatory COVID-19 vaccinations, as it would actually apply to ALL vaccinations. This bill would decimate our progress in public health in the past century and hinder our efforts to fight communicable diseases in the years to come. As a Pulmonary and Critical Care Physician, I can personally attest to the beneficial impact of vaccines in preventing potentially fatal respiratory diseases (influenza, measles, streptococcus pneumonia, pertussis to name a few), and I shudder to think of the strain on the healthcare system, specifically the Medical Intensive Care Unit, if current vaccination requirements and guidelines were weakened.

Thanks to vaccines, we live in a safer, healthier place than our ancestors before us did. Vaccinations are truly one of public health's greatest success stories. Through continued scientific breakthroughs, we continue to be spared from a multitude of setbacks and losses. HB 248 is deeply troubling, as it would give more diseases (some far deadlier and more contagious than COVID-19) the opportunity to run rampant, generate exorbitant, avoidable health care expenses, and most importantly, cost us lives.

UNICEF reports an estimated 20 million children's lives worldwide were saved by measles vaccinations between 2000 and 2016. Global polio cases have rapidly declined by over 99.9% in just over 30 years due largely to vaccinations. Additionally, a study published earlier this year found that an estimated 69 million lives will be saved by vaccinations against 10 major pathogens between 2000 and 2030.

Vaccines are a direct contributor to economic gains, too. The U.S. Centers for Disease Control and Prevention (CDC) estimates that for every \$1 spent on childhood vaccination programs, our country saves about \$10.90 in health care costs, and that routine vaccination of children born between 1994 and 2018 has saved our country close to \$406 billion in medical costs and \$1.88 trillion in total society costs. Studies by CDC researchers have found that in a typical flu season, influenza imposes an estimated \$87.1 billion economic burden on the country, and health care facilities requiring flu vaccinations among their employees can reduce patients' risk of contracting influenza or influenza-like illness by 42%.

Through vaccinations we not only provide critical protection for infants, young children, and immunocompromised individuals, but we keep ourselves, our families, and our neighbors safe. We have come to take the success of vaccinations for granted as we all benefit from their protection every single day. We cannot afford to risk weakening that protection with HB 248. If our experience over the past year with the COVID-19 virus has taught us anything, it is that any decision concerning our health should adhere to the most up-to-date and validated science, and should consider the implications for both physicians and their patients.

Unfortunately, as it is currently worded, this bill is a direct threat to both Ohio's Physicians and the people they care for, and will only result in our state becoming less safe and less desirable to visit or invest in, and I urge the committee to reject HB 248. Thank you for your consideration of my concerns.
