Chairman Lipps  
Vice Chair Holmes  
Ranking Member Russo  
Members of the House Health Committee

**Reference: Testimony on House Bill 248 (HB-248)**

Thank you sincerely for the opportunity to provide testimony on *House Bill 248* (HB-248). My name is Jeremy Brown, MD. I am a practicing Clinical Fellow in Endocrinology at Cincinnati Children's Hospital Medical Center.

I stand in opposition to HB-248, a bill that will threaten the health and well-being of Ohioans.

I have devoted my professional life to caring for children in the clinical setting and working to pursue better outcomes for children and their families across communities. Over the years, I have treated many children and young adults with chronic illness. The administration of vaccines in these high risk youths have prevented measles, mumps, pertussis, meningitis, influenza, and Multisystem Inflammatory Syndrome. Preventing these infectious diseases in youth has protected them from potential morbidity and mortality.

Vaccines and public health measures like masking represent some of the safest and most effective strategies we have to keep our children and communities healthy. Due to these strategies, children now live to adulthood, free from infectious diseases which previously caused wide spread death. Moreover, in the case of COVID-19, these strategies are bringing the promise of the end of the COVID-19 pandemic, a scourge that has killed nearly 20,000 Ohioans.

The science is clear with study after study underscoring the degree to which benefit of vaccines outweighs the risk. In contrast, HB-248 will result in a greater frequency of preventable diseases and associated morbidity and mortality in youth. Please consider the detrimental effect this legislation will have on the health of Ohio.

Thank you for the opportunity to voice my opposition to this bill.

Sincerely,

Jeremy T. Brown, MD
