

Chairman Lipps, Vice Chair Holmes, Ranking Member Russo and Members of the House Health Committee, thank-you for the opportunity to provide proponent testimony on House Bill 248

My name is Barbara Schwendenmann and I am a registered pharmacist currently working full time in the state of Ohio and the reason I support House bill 248 is because I do not believe the vaccinations are safe. When a vaccination was introduced for emergency use for the “swine flu” was halted after a mere 450 cases of Guillain Barre occurred. I have seen many more cases of adverse events with the available COVID spike protein injections. This should sound an alarm in the medical world. I am concerned that the public are not fully given the ability to give informed consent and the cases of death and severe adverse reactions to the “vaccines” available are not readily available to the public.

I am also concerned that about the classification of this current situation as a pandemic since we have not had an increase in the number of deaths in the United States from the average number of deaths of previous year pre 2020.

We are still in the experimental phase of these vaccines and we do not yet know the long term effects that they will have on those receiving them.

I don't believe the general public is educated that these are not vaccines in the traditional sense where a small amount of live or dead virus is given allowing the patient to create antibodies to the assailant virus.

I also have a concern that since we have not isolated or identified the Covid 19 structure that an effective vaccine would be able to be created.

I am also concerned of reports that there is a “Delta” variant as there are no available tests to determine any variants. The only tests available are to show if a patient is Covid positive or not. How is it that we are getting reports of a variant if it is unable to be shown that patient has a variant.

I have had severe anaphylactic and autoimmune issues in the past and I also have religious reasons for not wanting to be participant in using aborted fetal cell lines. I believe I am not alone in either of the above reasons for not wanting an experimental vaccine that is for a virus that has a very low death rate according to the CDC reports available on line.

Thank-you again for this opportunity to provide testimony on the need for urgency of House Bill 248
Sincerely,
Barbara L Schwendenmann Rph
