

August 11,2021

3909 Saint James Court
Springfield, OH 45502

Dear Representative Lipps:

I'm reaching out to you to ask you to vote yes for HB 248 because I feel that Ohioans should have the freedom & right to be the final decision maker on any medical treatment or procedure, including whether to be vaccinated. I'm not against vaccinations I've been vaccinated against other diseases including both Hepatitis A & B because the line of work I done working around drug addicts. I have a problem with a vaccine that hasn't been tested for any long term side effects. This vaccine from the time they started working on the Covid19 vaccine until the shots were administered into people was only approximately 9 months. The MRNA vaccines have never been used before & there a experimental gene therapy. I have researched vaccines & they usually take years to develop including watching for long term side effect data. My youngest son suffered a lifethreatening reaction to a vaccine that had been out for several years when he was a toddler & was unresponsive & was rushed by ambulance to Childrens hospital where he stayed for 2 days. As a parent it's the scariest thing in the world when you're kid is white as a ghost & in this state. Between December 14th & August 6th over 13,000 deaths have been reported with this vaccine & 443,000 adverse reactions according to the VAERS system administered through the CDC. The VAERS is a voluntarily program but it's also a felony to report a false report to this system. A 15 year old boy died in Colorado of a heart attack only days after taking this vaccine with no prior history of heart problems. No public or private entity should put any Ohioan in the position of having to choose between their livelihood, or access to goods and services whether or not to get a vaccine. In the name of fairness, individual rights & the American way, PLEASE VOTE YES ON HB 248!

Sincerely

Brian K. Latham
