

I Heidi Camp fully support HB 248, and demand that the Ohio Legislators pass this bill ASAP. Ohioans need protection against mandates and subsequent discrimination. Mandates are popping up everywhere, and we need protection now. Yes, Conservatives and Republicans typically support less government control, but these mandates are coming from Federal Government pressure, and Conservatives/Republicans demand Freedom!!

By getting the experimental Covid-19 vaccine, you aren't protecting anyone else. The vaccinated can still get and transmit the virus, and recent studies show the vaccinated actually have the same or higher viral load than someone who is unvaccinated. The vaccines only claims to reduce severity of those infected. Herd immunity can't be reached with this vaccine. Moreover, most Americans already have a 99.997% survival rate if infected.

I support vaccine choice across the board, as no one should be forced to undergo a medical procedure (masking or vaccine) to keep their job or attend school (grade school or college). Ohio has always had exemptions for grade school and it has worked great, so parents have always had the right to choose, and most do choose to get the vaccines recommended by their Doctor. We either need exemptions (religious, medical, conscience) for school, work, private businesses, or we need blanket protection against these mandates.

Thank you.

Heidi Camp

I am writing in regards to HB248.

I am writing to appeal to you in equity and good conscience, that you will vote to make these shots voluntary ONLY.

There are many that have religious, and medical reasons as to not take these. In addition, many here had covid and according to studies at Cleveland Clinic and Johns Hopkins University, have now developed a much stronger immune system against this than shot. They have stated that this shot could interfere with the natural immune system, or be no help at all.

I am a single mother who has raised my son to be a very responsible adult. He has taken our student loans to work toward a rewarding career as an RN. He worked so very hard to get to his degree and stood by so many that were sick last year. Through this, he did contract covid and in turn gave it to me. We both have a strong immune system now, with absolutely NO medical intervention at the time. Was it fun?, no, but we are happy that we now do have a built up immune system against it.

My son took a traveling nurse career and has been in Boston for a few months. His assignment end at the end of September. He had gotten an offer at a hospital in Cincinnati, which he was thrilled about, for a wonderful position in cardiac. That was before they adopted mandates. Because of these mandates, he had to turn down a very responsible position which groomed him.

He has had covid, he feels that the ingrateness in the shot is against our spiritual beliefs, and he also has had an allergic reaction to his flu shot, but that doesn't seem to matter unless you can jump through a lot of red tape. We are so very upset that this mandate would cause many to lose their jobs and virtually lose their careers that they worked so hard to attain. This degree did not come easy for my son and he is devastated. He is so committed and cares so much for his patients. We have spent so much money for him to earn this degree.

We are a fine country. I urge you for the sake of our freedoms, medical and otherwise to stop these mandates for ALL workers so that we can raise our economy once again. Stop this democratic agenda.

Thank you,
 Heidi Camp
