

Chairman Lipps, Vice Chair Holmes, Ranking Member Russo, and Members of the House Health Committee,

Thank you for the opportunity to provide proponent testimony on House Bill 248. My name is Jean Sweeney and I am a former teacher and private tutor. I am not an anti-vaxxer; my children have had all their childhood vaccines, as well as the influenza one every fall. I have had all my childhood vaccines, in addition to Hepatitis B, tetanus, and the flu one every fall.

I support House Bill 248 for the following reasons:

1. This is the **land of the free**  
free to decide what we do and don't put into our bodies every day...food, drink, medicine, etc.
2. **"My body, my choice"**  
Does that not apply now because we are in a pandemic with a 99% overall recovery rate?
3. **Recovery rate is 99%** overall  
I've read reports that the death toll is no worse than a bad flu season
4. **Therapeutics** work  
hydroxychloroquine, ivermectin, remdesivir are safe, cheap, and successful, so why aren't the FDA and NIH pushing these? These are like the "least restrictive environment" in the world of education.
5. **Crazy incentives** like Vaxamillion and getting paid to get the vaccine, as well as free food (Krispy Kreme), etc. You have to ask yourself "why?" If it smells like a rat and looks like a rat, it's probably a rat!
6. **No liability for the pharmaceutical companies** (Pfizer, Moderna, J&J) making the experimental "vaccines"  
No accountability and Moderna just reported a \$4million profit at the end of July
7. **Flip-flopping recommendations** from Fauci and the 3-letter organizations (CDC, NIH), counterfactual advice  
"15 days to stop the spread," no masks in the beginning; now even vaccinated have to wear them again

8. Unprecedented number of **physicians are speaking out** against this vaccine...hasn't happened before  
Dr. Simone Gold, Dr. Dan Stock (see below Instagram link),  
Dr. Byram Bridle (Canada), countless others
9. **Media "factchecks as false"** all posts about this vaccine  
If you ask questions about it, you're blacklisted
10. **Emergency Use Authorization**, not a vaccine  
Even if the FDA approves it soon (again, another 3-letter agency), there are no long-term studies on it to garner back the trust that's already been compromised
11. **mRna vaccine**...plenty of problems  
There has never been an mRNA vaccine approved by the FDA before because it creates something called "antibody mediated viral enhancement." Isn't it interesting that this virus is spiking again in the summer? Very unusual.
12. **Nuremberg Code**  
physicians are to give professional advice, not force their opinions on patients and patients have the RIGHT to refuse

Thank you once again for this opportunity to provide testimony on the need for and urgency of House Bill 248. Please vote YES on HB248.

Sincerely,  
Jean Sweeney, MEd
