

Dear Representative Lipps,

Healthcare workers at Kettering Health Network in Dayton, OH are mandated to take the covid vaccine or lose their jobs by 10/04/2021. In their mandate, there are zero provisions made to support science or common sense. Many healthcare workers have already acquired and recovered from Covid. One of those workers happens to be me. Cleveland Clinic recently put out an article stating that natural immunity from having had the virus is far superior to the vaccine. <https://citizenwells.com/2021/06/10/cleveland-clinic-study-finds-natural-covid-immunity-better-than-fully-vaccinated-no-reason-to-vaccinate-previously-infected-fully-vaccinated-still-getting-covid-and-adverse-reactions> .

Another source said as much:

<https://www.israelnationalnews.com/News/News.aspx/310963>

Why is there no provision for workers who had and recovered from covid? Furthermore, we are finding out that tests were faulty, and death numbers were inflated. Therapeutics were denied and censored. Why was ivermectin and Plaquenil (Hydroxychloroquine) not used? Vitamin D and Zinc along with Ivermectin have shown to be effective treatments. Vaccines are only needed when there are not therapeutics. Why was the use of therapeutics not allowed? Everything about this pandemic has spurred questions and shown multiple inconsistencies. Recently another video emerged where Dr. Dan Stock laid out a compelling argument at a Mt. Vernon School Board Meeting. He states that those who have natural immunity are “two to four times more likely” to experience side effects from the vaccine.

Most all vaccines take years to study. The flu vaccine took almost fifteen years to approve. The FDA is rushing this approval through, and for what? People who are vaccinated are still told to wear masks. This makes no sense and we should all be asking: Why get vaccinated then? Also, there is a lack of informed consent. The hospitals and pharmacological companies bear no responsibility or liability for people who have been harmed. There are numerous accounts of death, shingles in the mouth, muscle weakness, strokes, heart attacks, blood clotting, and one twelve-year-old girl was paralyzed from the waist down. Who will pay our bills when we take a shot that incapacitates a person? There are many more accounts of harm, but those videos and testimonies are quickly censored off of the mainstream media and social media platforms. The sheer fact that intelligent debate and an exchange of ideas from astute medical minds has been censored and continues to be censored, should cause everyone to pause and ask why. What is the real agenda here? If the government truly cared about health, would they allow a 900% increase of covid cases to pour over the border and flood our communities?

Lastly, what is the financial relationship between Medicare, Medicaid, big pharmacology companies, and the hospitals? Most hospitals are monetarily incentivized to meet certain benchmarks. It goes without saying that we all know there is financial gain to mandating employees get the vaccine. This has little to do with health (especially since people who had the vaccine are still getting covid), and everything to do with an agenda that if you still don't see it you are choosing to be willfully blind.

Sincerely,
Lisa Boucher
