

To whom it may concern,

I'm writing this email to voice my utmost support for HB401. The siting of INDUSTRIAL wind turbines should be made at the local level by citizens who know what is best for their communities. The process in place in Ohio currently is very flawed. There are many reasons wind turbines should not be built. Reduced property values, shadow flicker, noise, blade throws, infringement on property rights, negative effects on wildlife and birds, conflicts with air ambulance, and possible contamination of ground water are some of the concerns of the citizens of Seneca County.

Thanks for your time,

Nathan Miller
