House State and Local Government Committee

Chairman Wiggam, Vice-Chair Stephens, Rankinf Member Kelly and members of the House State and Local Government Committee:

Thank you for the opportunity to write a testimony in support of SB 618. My husband Dominic Vechiarelli and I have owned a small business in Westlake, Ohio for over 18 years. We are chiropractic physicians specializing in pregnant moms, children and family care and many of our families share our same concerns.

As business owners, health care providers, parents and Ohioans we are concerned about the current power and authority individuals have taken during the COVID 19 pandemic. We are concerned about the economic ramifications, social and emotional issues that have arised in Ohio and we are a proponent of SB 618.

Many of our patients are business owners like us. We have been blessed to be deemed “essential” and have been working but saw a reduced volume of patients by 50-60% in the first 8 weeks of the pandemic. My patients were telling me, “if my business can’t open soon, I will have to close. I am stressed and depressed.” Many others were concerned about how they were going to feed their children because they were either not working or working reduced hours. We cannot have another shutdown and the Ohio Revised Code must revised to protect workers and businesses.

As health care providers, we believe the science is not matching what the Governor and the Ohio Director of Health are relating to Ohioans. It is common to protect the sick but to mask everyone including the healthy and the young have never happened until COVID 19 began. Mandating masks have not helped the spread of COVID 19. Apparently, it has been worsening each day as the Governor revised his mask mandate policy on 11/11/2020. The WHO states “the wide use of masks by healthy people ... is not supported by current evidence and carries uncertainties and critical risks.... There is no current evidence to make a recommendation for or against their use.” “Currently we are not finding any data that can quantify risk reduction from the use of masks”, a CDC spokesperson told Reuters. The British Medical Journal state in April 2020 that “Face masks make breathing more difficult. For people with COPD, face masks are in fact intolerable to wear as they worsen their breathlessness. Moreover, a fraction of carbon dioxide previously exhaled is inhaled at each respiratory cycle.”

As parents, we are concerned about the education and the future of our children. In March, when Governor DeWine closed all schools in Ohio, it was incredibly difficult to work and teach our children when we returned home. This fall, our children are “lucky” enough to attend private schools so they have been able to go in person but are subjected to wearing masks. Many of my patients who are teachers are very frustrated and stressed. They are either teaching remotely or

going in some days and staying home other days in the hybrid system. They say that learning has severely been affected. Students need social interaction with friends and teachers. Parents who come in to see me say their children are struggling because they are unmotivated at home. Parents say their children are depressed, anxious and have had poor behavior since this school year has started. They see their homes as places to rest and play and not to a place to watch a computer screen 8 hours a day as a replacement for school.

My husband's great grandparents and my parents are immigrants. My parents left communist China to give me "a better life." It is ironic that all the freedoms and liberties that our forefathers so desperately fought for are the same ones being taken away from us as we speak.

Thank you for allowing me to give my written testimony.

Sincerely,
Michelle Yan, D.C.
