Dear Senator Wilson,

I am writing to you expressing my grave concern over HB 234.

I am a lease holder that regrets such action. When we signed up we were told for example that the turbines would be the same size as the ones near Bowling Green, Ohio off of Route 6. I mistakenly took the employees word for it and now I find that they are going to be 655 feet high and have been informed that they could be a quarter of a mile high and we would have nothing to say about it. I know that many other lease holders feel this way but are reluctant to speak out on this. I have talked to a few and they agree but won't do it publicly. It is a mistake that I regret and I can blame no one but myself for not going to a lawyer. I know how not to take anyone's word.

I believe that the people that will have to live with the turbines forever should at least have a vote on their future and well being. Please give them the chance to vote on it as the companies could care less about our beautiful state as they will walk away with

their pockets full of money and not be effected by this. We will be passed on from turbine company to company as has been done in the past.

These turbines are not efficient or practical no matter what they may lead you to believe.

You can do anything with statistics and they do. Woody Hayes once said that statistics are deieving. He once had a student that drowned in a stream with an average depth of 3 inches. A great example of twisting statistics around.

Please push for a vote by the people who will be effected by these 655 foot monsters.

Thank you for your time and effort.

Sincerely,
Joseph G. Fritz
