

Submitting to support SB 61 hoa solar panels. My concerns are around hoa's and historical originations not allowing persons to install roof top solar panels . I have moved from a home with solar power to a new low maintance community in Harrison Ohio , the hoa will not allow me to install solar panels . I travel in the winter and the panels would protect my home if there were to be a disruption in the power grid . Like what happen in Texas this pass winter.

I would like to buy an all electric vehicle. With panels and battery back up I could decrease my cost while supplementing the grid with energy .

Please keep this benefit in mind if you should ever vote or speak to other senators . ( I live in New Orleans during the winter and still unable to put panels on my home there due to historical preservation society because of my small roof space ). Please continue to support solar power .

Thanks for your service

Linda and James Beerman
