HB 319 written proponent testimony

It has come to my attention that a good bill regarding vaccines is coming up before your committee.

I want to support this bill because I have seen first hand how devastating vaccines can be to people who are sensitive to them. A friend of mine had a bubbling toddler until she got vaccinated, and immediately became withdrawn. After many years, she is still severely handicapped in her social interactions. I have other friends who have suffered joint pains, etc., from the covid shots.

Not all persons react this way, but enough do that it is far from coincidence. Forcing someone to get vaccinated or be out of a job, or not able to attend classes, or not fly on an airplane, etc. is not right.

If the vaccines are as safe as the pharmaceutical industry says they are, then there would be no need for special legislation that protects them from lawsuits. The pharmaceutical industry has richly paid legislators (thru campaign contributions), the media (thru massive advertising) and they have infiltrated the CDC and FDA to the extent that they are no longer trustworthy public servants. The end result of this is that my tax dollars are spent making the industry rich, and many of us are forced to take medical treatment we do not want.

This legislation is badly needed.

Thank you for hearing me out.

Donald E Hartley
